Himani Soni

Full Stack Engineer

Contact No : +91-9068161302 | *Email Id : sonihimani428@gmail.com* | LinkedIn | GitHub

PROFILE

Full Stack Engineer with 3 years of experience building scalable web and desktop applications using React, Node.js, Express.js, JavaScript, TypeScript, and Electron. Skilled in real-time systems (WebSockets, MQTT, Modbus), secure REST API design, backend integrations, and performance-optimized, maintainable architectures for user-centric products.

SKILLS

Frontend: ReactJS, Redux, Redux Toolkit, HTML5, CSS3, JavaScript (ES6+), TypeScript, Tailwind CSS, Bootstrap, Material UI, Mantine UI, Three.js
Backend: Node.js, Express.js, Electron, RESTful APIs, WebSockets, MQTT, Modbus RTU/TCP, Microsoft Graph API
Database: MongoDB, PostgreSQL, CouchDB, PouchDB, Firebase
Build & Testing: Webpack, Gulp, Parcel, Vite, Vitest, Jest
Cloud & Version Control: AWS (EC2, S3), Firebase, Git, GitHub, GitLab
Tools & Process: Visual Studio Code, Postman, Cursor, Antigravity, Scrum, Kanban

EXPERIENCE

Libratherm Instruments Pvt. Ltd. *April 2026 – Present*

PRC-309: Industrial Monitoring and Automation Application (Electron, React, TypeScript)

- Built React screens, configuration forms, live monitoring dashboards, and reporting workflows using Redux Toolkit and Mantine UI; integrated the UI with Electron's main process through IPC.
- Built real-time device communication over Modbus RTU/TCP, MQTT, and Telnet to read process values and send commands, with polling, timeouts, retries, and automatic reconnection.
- Supported live updates for temperature, setpoints, alarms, and device status, plus MQTT master-client data sharing; contributed to local storage with PouchDB and Firebase cloud sync.

Cancellations: Appointment Cancellation and Slot Management (React, Node.js)

- Built appointment cancellation and slot-management workflows with React, Node.js, and REST APIs, including validation and error handling.
- Contributed to a Microsoft Graph API email workflow that notifies eligible users when a cancelled slot opens, with first-come, first-served claim links; used Promise.allSettled() so one failed email did not stop the batch.

Tata Consultancy Services *Nov 2022 – June 2025*

VIAVI: Network Monitoring and Management (React, Node.js, Express.js, Redux, WebSockets, Three.js)

- Developed a full-stack application using React and Node.js for managing networking hardware products; built reusable React dashboards, device management panels, and real-time data visualization components with charts and Three.js.
- Designed and implemented secure RESTful APIs using Node.js and Express.js, with WebSocket integration for live updates of metrics, alerts, and logs.
- Applied Redux for global state management and optimized React performance using React.memo, PureComponent, useCallback, and useMemo, reducing unnecessary re-renders by 40%.

Walgreens: Retail Pharmacy Application (React, Redux, REST APIs)

- Developed reusable React components, forms, dashboards, and workflow screens, and integrated REST APIs to retrieve and submit application data.
- Implemented form validation and error handling, managed state with Redux, and worked with QA and business stakeholders to validate behavior and fix UI issues.

PROJECTS

TaskFlow: Real-Time Collaborative Kanban Platform (React, Node.js, Express.js, Socket.IO, PostgreSQL, JWT)
Full-stack project-management app where teams share boards, columns, and cards that sync live across users through Socket.IO rooms. Built a REST API with JWT authentication, bcrypt password hashing, Zod validation, and owner/member role-based board access; designed a relational PostgreSQL schema with transactions, indexes, and an activity log. Used fractional card positions so a drag-and-drop reorder is a single-row update, and wrote integration tests for auth, access control, and real-time events.

Latency Topology Visualizer (ReactJS, Three.js)
Interactive web app visualizing real-time and historical network latency across global exchange infrastructures, with dynamic 3D globe rendering, animated latency paths, provider-based filtering, and performance-optimized rendering.

Fitness Tracker Application (ReactJS, Node.js, Express.js, MongoDB)
Full-stack app to log workouts, track progress, and set goals, with secure user authentication, MongoDB storage, and visual progress tracking.

EDUCATION

BSA College of Engineering & Technology, Mathura *July 2018 – June 2022*
Bachelor of Technology, Computer Science Engineering
